

What's going on in ...

Computer Science & IT

Students are currently learning how to build websites in Dreamweaver towards their website development unit. In the next couple of weeks students will sit their cyber security exam amongst other and final prep is under way for this.

Our computer scientists are currently learning different techniques that systems analysts use to investigate computer systems. They will then be using this knowledge and applying it to their coursework conducting questionnaires and interviews to find out what their clients need from the new system.

The department has teamed up with Bolton University to trail a games development enrichment, students are currently learning how to add levels and creating environments. This will be rolled out fully next year.
